compound of iten
i.

AB Perhydronaphthol derivs. I (R = alkyl, acyl) were prepared Thus, cyclohexanone II (R1 = H) was converted to its morpholine enamine which was alkylated with MeCOCH:CH₂ and hydrolyzed, forming II (R1 = CH₂CH₂COMe) as a 95:5 equatorial-axial mixture The diketone was cyclized with NaOMe to form cyclohexanone III, which yielded I (R = H) upon repeated Birch reduction Alkylation or acylation of I (R = H) gave I (R = alkyl, acyl), whose phase transitions and nematic ranges are given.

ST liq crystal perhydronaphthol prepn; nematic perhydronaphthol ether ester
